

Amendments to the Specification:

Please replace the paragraph [0028] with the following amended paragraph:

--[0028] It is also possible to provide sensors which record the measured variable reversibly and represent it by visible changes. These can be strain elements 31 which are arranged on a printing material web 30 according to Fig. 3. It can be seen that constrictions have been formed on the strain elements 31 on account of the tensile loading. A high-speed camera system 26.1 (see Fig. 2a) can be arranged on the machine in the web path, record the extent of the constriction and determine from the latter the tensile stress that is present. --
